

HANGAR

Design by:
Piero Lissoni

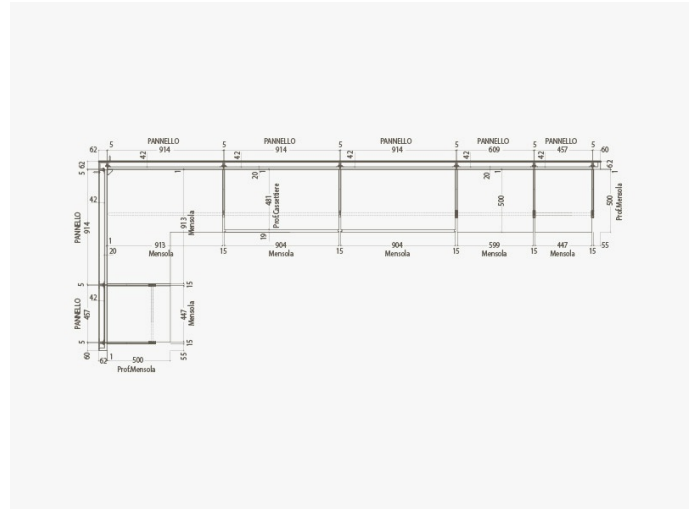

Year:
2011

Hangar walk-in closet designed by Piero Lissoni aims at creating a personal space, pleasant to look at and comfortable, thus shifting the focus from mere container function to wellness. Hangar is designed to store everyday objects, rationalising the space but also implementing any planning idea. Every object is neat and free at the same time: an intelligent, functional system structured on the needs of who inhabits it. A charming product thanks to the warmth of the wood and lightness of the glass and its reflexes. A tailor-made solution, appealing for its endless design possibilities, where the various elements and accessories are fitted along elegant floor/ceiling metal uprights that concur in supporting the weight of the equipment, providing a precise style and quality detail.
